- ChatGPT

Business Analysis

Dataset & EDA

	A	B	C	D	E	F	G	H	I
1	Order_ID	Order_Date	ProductID	City	Product_Category	Product_Name	Quantity_Sold	Cost_Price	Unit_Price
2	ORD00840	2024-05-07	PID1001	Bangalore	Dessert	Ice Cream	5	185.79	269.05
J	K	L	M	N	O	P	Q	R	
Discount_Percent	Customer_Type	Payment_Mode	Total_Cost	Revenue	Profit	Profit_Margin	Promotion_Type	Discount_Impact	
10.58	Returning	Card	928.95	1345.25	416.3	0.31	None	142.33	

- Chatgpt driven Dataset.
- Replacing null Values are with "0".
- Blank Text entries with "Unknown".
- Revenue including Discount: $\text{Revenue} = \text{Quantity} * (\text{SellingPrice} - (\text{SellingPrice} * \text{DiscountPercent} / 100))$

1000 TastyBites Product
Pricing & Profitability Data
Entries **FY 2024-2025**

DAX Measures

```
Average_Order_Value = DIVIDE( SUM(TastyBites_Orders[Revenue]), DISTINCTCOUNT( TastyBites_Orders[Order_ID]) )
```

```
Profit Contribution % =  
DIVIDE(  
    SUM(TastyBites_Orders[Profit]),  
    CALCULATE(  
        SUM(TastyBites_Orders[Profit]), ALL(TastyBites_Orders[Order_ID])  
    )  
)
```

```
Profit Margin % =  
DIVIDE(  
    SUM(TastyBites_Orders[Profit]),  
    SUM(TastyBites_Orders[Revenue])  
)
```

KPI Summary

Total Quantity sold
4K
Avg Order Value(AOV)
\$1.3K
Profit Contribution(%)
1%
Total Discount_Impact
\$181.4K
Profit_margin
23.45%

Business Insights and Recommendations in terms of Quick wins and long-term strategies

Food Product Performance

- Most Profitable is Pizza compared to Italian Pasta because we spend more on it comparatively, least profitable are Chinese Noodles.
- Revenue lost majorly on Indian Biryani.

Food Product Performance

Quick wins(0–3 Months)

Recommendations to actions:

- Bundle high-profit products with low-profit products to improve overall profitability.

Long-term strategies(3–12 Months)

- Implement profitability-based product segmentation (High, Medium, Low Profit Products).

Numerical Statistics:

Revenue, Total_Cost and Profit

Discount Percent Analysis

Most Profitable is Pizza from Fast food on Slide No: 8

Discount Percent Analysis

Quick wins:

- Test different discount levels (5%, 10%, 15%) to identify the most profitable option

Long-term strategies:

- Develop dynamic discounting based on demand, inventory levels, and seasonality.

Conclusion

- The Case Study analyzed product profitability to identify high-profit and low-profit products and understand how discounts and promotions impact overall profit margins.
- The analysis revealed that while discounts can increase sales volume, excessive discounting often reduces profitability, particularly for low-margin products.
- Pasta, followed by pizza, generated more revenue and showed a high profit
- This may be varied across regions due to differences in food preferences, customer demand patterns, and purchasing behavior.
- Implementing both short-term and long-term pricing strategies will help the company make data-driven decisions, protect profit margins, and achieve sustainable revenue and profitability growth.
